

# The hypernat package\*

Jens Berger

2001/07/09

This package makes the `hyperref` package and the `natbib` package with options `'numbers'` and `'sort&compress'` work together. This means, that the citations (e.g. [3,2,1]) will be compressed to [1-3], where the '1' and the '3' are (color-)linked to the bibliography.

The changes I made here are suggested (in August 2000) for the next `natbib` release.

This package will disappear from CTAN, when `natbib` will do the job by himself.

Load this package after `natbib` and `hyperref`!

Please make sure that you are using at least `natbib` v7.0!

## Changes

v1.0b 2001/07/09 – anchor for all citations in the list added to make `backref` options working (bug reported by Günter Keusen)

v1.0a 2001/01/22 – `\noexpand` for some `\hyper@natlinkend` added (bug reported by Frank Meißer), `hypernat.sty` is working now for `'dvips → ps2pdf'` or `'dvips → Distiller'`

---

\*This manual corresponds to `hypernat` v1.0b, dated 2001/07/09.
